

Healthcards from Ecebs

The use of Smartcards in the field of Health care is a prime example of how advanced technology will materially improve the quality of life for millions of people.

A Smartcard is a means of carrying, or giving access to, Medical records in a highly secure manner on a card the same size as a credit card, a 'Healthcard'. The Healthcard ensures that Medical professionals can instantly see the cardholder's medical history. As a result, the time for diagnosing the patient's condition and commencing treatment can be significantly reduced. Healthcards are particularly advantageous in accident or emergency situations since life saving information can be provided

Features of Healthcards:

- Secure, rapid access to complete, up to date, medical records.
- Can work either on or off line.
- Easily carried.
- The Healthcard can also have other applications on, a multi function card.
- Integrate with existing clinical and other legacy systems.
- Patient Empowerment

At Ecebs our team have extensive experience in designing and implementing Healthcard systems.

Healthcards can be used to store complete medical records on the secure chip embedded in the card or enable access to records held on a central computer system.

They become the device by which comprehensive and accurate data is maintained concerning a patient's medical history. So often delays occur in maintaining records, caused by simple problems like letters being mislaid, that the administration becomes costly and cumbersome. Healthcards will eradicate these problems

Where patients have an ongoing condition, or need to see a variety of medical professionals, such as in pregnancy, the Healthcard quickly establishes itself as an essential communication tool.

The patient can also use the Healthcard to access relevant information via the Internet or, for example, recording fitness and diet regimes. In this way the patients can be more empowered concerning their own condition and treatment.

Healthcards from Ecebs

- Complete Medical Records on the Card or controlled access to database records, or a combination of these.
- Medical professionals can access patient information out of hours, outside the clinic and in emergency situations.
- Additional functions can be included on the Healthcard, such as Medical Insurance or Prescriptions.
- Healthcards can integrate with leading clinical healthcare systems, protecting the IT investment made so far.
- Patients are able to use the Healthcard to direct them to specific and relevant information on the Internet and elsewhere concerning their medical conditions.
- Healthcards are secure, ensuring that only those authorised to see the information are able to view it.
